

PRESS RELEASE

KINRIG 3 REDUCES COMPLEXITY IN TERMS OF AUTOMATION AND COMMISSIONING OF MACHINES AND PLANTS

- **Simple automation and commissioning without the need for special programming knowledge**
- **Time saving of 50 % and beyond during commissioning compared to conventional programming**
- **Innovative operating concepts ensure that complex procedures are easily mastered**

Kötz, 25.11.2015 (ds). Kinmatec, developers of user-friendly automation software, will present the latest version of KinRig 3 at this year's SPS IPC Drives exhibition. The newly developed user interface as well as the automation without special programming knowledge ensure that even the most highly complex automation processes can be easily mastered. With KinRig 3, companies are able to shorten the commissioning time of machines and plants by 50 % and beyond compared to conventional procedures.

Peter Klotz, Managing Director at Kinmatec, explains the advantages: "Our experienced mechanical engineers, test bench operators and machine operators have created a platform that is easy to operate. With KinRig 3, employees are able to concentrate on working with the machine. Commissioning and automation will become easier and faster thanks to our modular framework."

About KinRig 3

KinRig is a piece of automation software with which you can program almost any machine quickly and uniformly. Without any special programming knowledge. KinRig 3 is compatible with all common PCs and can be set-up on all conventional software environments. KinRig is an open and expandable piece of software with

numerous interfaces to programs such as Microsoft Excel and DIAdem. Standard function libraries can be expanded into other systems such as Beckhoff TwinCAT 3.1 or Siemens WinAC via your own scripts or functions.
